Portfolio: most-05.github.io/personal_portfolio
Cooperative education, 16 Nov 2026 – 7 Mar 2027, full-time

## SUMMARY

Fourth-year ICT student at Prince of Songkla University — 250 commits across 19 pull requests in a Next.js + TypeScript + Prisma/PostgreSQL codebase, owning the appointment and viewing-slot subsystem from database table to API rules. Previously a two-month data analytics intern at a PSU office — built a Power BI dashboard for my supervisor and a 21-page manual for my successor.

## TECHNICAL SKILLS

- **Front End:** HTML5, CSS3, JavaScript / TypeScript, React, Next.js (App Router), Tailwind CSS, Flutter
- **Back End:** Node.js, Express.js, Next.js API Routes, REST API, NextAuth, RBAC
- **Databases:** PostgreSQL, pgAdmin, MySQL / MariaDB, Prisma · ER & schema design
- **Analysis & Design:** context diagram, DFD, data dictionary, Power BI, Excel / Power Query, Figma
- **Testing & Tools:** Playwright, Git / GitHub (branch + PR), VS Code, CLI, Claude Code CLI
- **Soft Skills:** Self-Study · Time Management · Team Communication · Proactive Attitude

## PROJECTS

**Srichai Property — Real Estate Platform** *Jul 2026 – Present*
Full Stack Developer · Capstone project, two-person team · github.com/PHmeen/SrichaiProperty
Next.js 16 (App Router) · TypeScript · Prisma ORM 7 · PostgreSQL · NextAuth v4 · Tailwind CSS · Pusher · Recharts

- Designed the system on my own before writing code — a context diagram, two levels of DFD across 8 processes, a 32-table ER model and a data dictionary — then designed the property_viewing_slots table, binding viewing slots to a property rather than to an agent
- Closed three access-control holes and enforced the booking rules in the API — one pending booking per customer per property, availability checked before insert, cross-property conflict detection
- Rebuilt the agent double-booking check as hasAgentBookingConflict, reading real appointments instead of opened slots — a deliberate redesign of my own earlier approach

**GameStore — React Storefront with an End-to-End Test Suite** *2025, rebuilt Aug 2026*
Developer · Solo rebuild · 144 commits · github.com/Most-05/game-store
React 19 · React Router 7 · React Bootstrap · Playwright · Node.js mock server

- Rebuilt a lost Express/MySQL backend as a dependency-free Node mock server mounted onto the dev server, so the app runs from one command
- Wrote an 81-case Playwright suite covering every route and link, the auth flow, the shared wallet and all three shops
- It caught what a visual review missed: a missing CartProvider, and a checkout that never deducted the balance

**Property Viewing Appointments — Flutter Mobile App** *Aug 2026 – Present*
Developer · Coursework · two-person team · 60 of 78 commits are mine
Flutter / Dart · Express.js · MariaDB · JWT · Google Sign-In

- Built the booking feature end to end across five API routes — list, create, edit, cancel, and a per-property booking count
- Guarded eleven endpoints with a checkAccessToken middleware plus ownership checks, and covered the booking flow with a Flutter integration_test

## EXPERIENCE

**Data Analyst Intern** *16 Apr – 12 Jun 2026*
IT and Corporate Communications Department, Khunying Long Athakravisunthorn Learning Resources Center, Prince of Songkla University

- Cleaned and restructured five years (2021–2025) of library statistics for five universities in Excel, fixing multi-level headers, mixed number/symbol values and inconsistent institution names, then modelled them in Power Query
- Built a five-page Power BI dashboard for my supervisor, the department head — showing PSU's library runs 48 information systems (peer average under 25) on an IT budget six times smaller than the largest peer
- Wrote a 21-page handover manual so the next intern could update the dashboard on their own

## EDUCATION

**Prince of Songkla University, Hat Yai Campus** *2023 – Expected 2027*
B.Sc. in Information and Communication Technology, Faculty of Science
